

WELCOME TO 2019 SUMMER CAMP

Unit Nurses

Brittany Coon • Pat Binns • Abbie Goodman
Jacqueline Scott • Kari Overstreet • Kaitlin Campbell

Night Shift Nurse • Casey Kalica

- ▶ We allow campers to keep “rescue meds” on them or a counselor with them as long as the meds are clearly labelled with camper’s name, cabin, and color. Rescue meds include: EpiPens, anti-epileptic (Diasat), Albuterol inhaler, or Benadryl (in extreme cases).
- ▶ Campers receiving scheduled home meds will have those meds poured and double checked on Sunday, meds will be administered by medical personnel and documented via Campsite throughout the week, mostly at meal times; Practice 5 rights of administration with every med delivery.
- ▶ PRNs: many of our campers will become fatigued/sore throughout the week. If a camper asks for pain medication for HA or other muscle/joint pains, and they have a PRN on their MAR, go ahead and administer and document in Campsite.
- ▶ If a camper asks for a PRN, and they do NOT have anything listed on their MAR, first assess their forbidden OTCs and allergies; Notify Unit nurse, Medical Director, or Nursing Director of intervention, and create log.
- ▶ During this week, we encourage you to be present with your campers for high-risk activities (i.e. barn, waterpark, zip line, tower, etc).
- ▶ Use GENERAL precautions (gloves for anything that is bodily substances).
- ▶ Please be at the Body Shop 10-15 minutes before meals to gather up medications, iPads, and supplies for mealtime med pass.
- ▶ When you head to bed for the night, please check in with your Unit Nurse, just so we can say ,“Thank you and goodnight.” ;)

Heart/Lung/Kidney Guideline

- ▶ Many of our campers this week will have time-sensitive medications. Closely monitor “off-time” medications in eMAR for these meds.
- ▶ Utilize the “off-time” board in the Body Shop and check off off-time meds as they are administered.
- ▶ No kissing fish for any immunocompromised or transplanted children.
- ▶ This is considered “no salt” week at camp, so be prepared. :)

Kidney

- ▶ Our kidney doctors are from UNC. Please defer any dialysis or medical management of our nephrology campers to them.
- ▶ If your camper has hemodialysis during their stay at camp, please communicate with the Dialysis RN about any blood pressure meds that may need to be held prior to HD.
- ▶ If your camper has dialysis, we'll have a Dialysis Nurse who will manage the machine and dialysis of your camper.

Lung

- ▶ If your camper is on oxygen, please ensure that they packed the oxygen tanks/concentrators they needed.
- ▶ Ask parents about goal sats, activity restrictions, and interventions if camper is not tolerating camp.
- ▶ If a camper has a breathing regiment (i.e. Albuterol neb, chest vest, or pulmazyme) ask parent about:
 - Frequency of treatment
 - Order of treatment, and how it is done at home

Heart

- ▶ Ask for baseline vital signs.
- ▶ If a camper is on a blood pressure medication, ask if they'll need a BP check prior to administration.
